Website descriptions

Jurassic Care is an e-commerce platform which sells service dinosaurs to our customers. We allow users to browse through our list of dinosaurs that can accommodate their everyday needs. Users can contact us and review any purchased dinosaurs as well.

Features by Pages:

- **signup.php**: This page allows users to sign up by providing their **email**, **first name**, **last name**, and **password**. The password is **encrypted** before being stored in the database to ensure security. The page also includes protections against **SQL injection attacks** to safeguard user data.
- **login.php**: This page lets users log in by entering their **email** and **password**. It checks the credentials against the database, ensuring secure authentication. The page also implements **SQL injection protection** and secure user login session handling.
- **profile.php**: This page displays the user's **account details**, including their **email**, **first name**, and **last name**. It also allows users to **update their information**, such as **changing their password**. The page ensures that changes are processed securely, with **password encryption** and **SQL injection protections** in place.
- **aboutus.php**: This page provides a **short blurb** about what the website or company does. It offers an overview of the mission, services, and goals, helping visitors understand the purpose of the website and its offerings.
- **contact.php**: This page allows users to **fill out a form** to send a message to the website team. The form collects the user's **email** and **message** so the team can get back in touch. It serves as a point of communication for inquiries, support, or feedback.
- **admin.php**: This page checks if the logged-in user has **admin privileges**. If the user is an admin, they gain additional powers, such as the ability to **add new products** (service dinosaurs) for customers to browse and purchase and the authority to **delete users** if necessary. When deleting a user, a module will ask the admin to confirm their choice to prevent damage from misclicks. It provides the admin with control over key site management tasks.
- **home.php**: This is the landing page that users see after logging in. It provides **basic information** about the website and its services, such as **24/7 support** and **fast shipping**, and a **brief overview** of its features. It sets the tone for the website's offerings and guides users to the next steps in browsing or purchasing products.

- **shop.php:** This page displays all the **service dinosaurs** currently available for purchase. Each dinosaur is shown with a **short description**, **price**, and an **image**. Users can **search** for specific dinosaurs using a search bar or **filter** the products based on certain categories (e.g., price, type). Clicking on any dinosaur's image will take users to the **product page** for more detailed information.
- **product.php:** This page provides detailed information about a specific **service dinosaur**. It includes a **detailed description**, **price**, and **image**, along with a section showing **user reviews** of that particular dinosaur. Users can better understand the dinosaur's features and customer feedback before deciding to purchase.
- **review.php:** On this page, users who have **purchased** a specific service dinosaur can leave a **review** about it. Users must be **logged in** and have **purchased** the dinosaur to be eligible to leave a review. This allows users to share their experiences and help other potential buyers make informed decisions.
- **checkout.php:** This page allows users to **pay** for any dinosaurs in their cart, with the payment process being **virtually implemented** (not fully implemented for security reasons). Before making a payment, users can **add more dinosaurs** to their cart. The page facilitates the final steps of the purchasing process, ensuring a smooth transaction experience for users.
- **viewcart.php:** This page tracks all dinosaurs the user wants to buy. The user can increase and decrease the quantity of dinosaurs they want as well as deleting specific dinosaurs from their cart. You can track the subtotals and quantities for each dinosaur and see the combined total amount and quantity for the dinosaurs in your cart.
- **Overall Functionality:** The website uses **JavaScript** to validate form inputs on the client side, ensuring quick feedback for users. **PHP backend validation** is also implemented to ensure more secure and thorough form data validation. **CSS** is used to style the sections appropriately, ensuring a clean and responsive design. The website relies on **MySQL databases** to store and manage the data, providing the backbone for displaying dynamic content, such as user accounts, product details, reviews, and more.

What Makes Us Special

• On the website, a fun quiz page uses JavaScript, HTML forms, and CSS to ask users a series of playful questions. Based on their responses, the quiz directs them to a personalised product page featuring a service dinosaur based on their answers. The page leverages JavaScript for interactivity, HTML for the structure, CSS for styling, and PHP to handle the backend logic, ensuring a smooth and engaging user experience.

- **Admin Privileges:** The website grants **special privileges to admins**, allowing them to maintain the site, manage the product catalog, and oversee users and customer accounts. Additionally, **preventative steps** are implemented to **avoid accidental damage** during administrative tasks, ensuring smooth and secure website management.
- **Advanced Shop Filtering:** The **shop page** offers **complex filtering** options, enabling customers to apply multiple filters simultaneously and view filtered results.

Customers can **search within filtered results**, providing a more personalised and refined shopping experience. This dual-functionality enhances ease of navigation and product discovery.

Limitations

- A user can currently submit unlimited reviews, thus spamming the system.
 - No rating system (4/5, stars, etc) like Amazon (or other E-shopping) sites.
 - No way to cancel an order.
 - No way to return/refund an order.
 - No email verification so that users can submit such responses as "abcd@efg.hij"
- *Note: This list is not exhaustive. It is based on what we found exploring edge casing and trying to use the website in ways it's not supposed to be used.
